

## COP2073C Module 10 Programming Assignment

### Instructions

Using the tidyverse nycflights13 "flights" data, call the arrange() function to sort the data by longest to shortest flight distance, then by longest to shortest airtime (all within a single call to arrange() ). Then use select() to select the distances, airtimes, carriers, and months in which they occurred. Selected data should be as follows:

```
# A tibble: 336,776 x 4
  distance air_time carrier month
  <dbl>    <dbl>    <chr>   <chr>
1   4983     691 HA      2
2   4983     686 HA      3
3   4983     686 HA      3
4   4983     683 HA      3
5   4983     679 HA      2
...
```

### Non-Functional Requirements:

- Include a 4-line ID header at the beginning of your script.
- Include vertical spacing (a blank line) between logical blocks for readability.
- Comment your code thoughtfully (avoid excessive commenting).
- Ensure each line of code does not exceed 80 column
